Perspectives on Work, Welfare and Society

The crisis in British society has many facets: devaluation, the hostility between the Labour government and the trade unions, the radical student movement, the growth of racialism.

The *Perspectives* series is a new attempt to analyse these developments from a socialist standpoint. It does this by examining in turn key sectors of British society—beginning with industry, the trade union and the Labour movement—and relating current changes to the unchanging structure of economic power and inequality. On the basis of statistics clearly presented and simply analysed, this series challenges the slogans and solutions of all the political parties and argues for the continuing validity of the socialist critique of our society. The series is introduced by a discussion of fundamental marxist ideas.

Simply written, with full source references and bibliographies, these booklets make an ideal introduction to the study of society for both students and the general reader.
