PROBLEMS OF LABOUR AND INFLATION

Hilde Behrend

Hilde Behrend, long recognised as one of the authorities in industrial relations, now presents the essence of her views in the form of a collection of essays. She examines the problems within the system from two basic stands; the economist concerned with labour as a resource, and the psychologist concerned with the behavioural activity of the labour force. This inter-disciplinary approach ensures the relevance of the essays to social scientists, managers and policy-makers. There is also a fascinating exposition on the development and background of these studies. The essays examine closely many contemporary problems within the present structure of industry, including wage policies, financial incentives and other accepted economic policies. She concludes this book by evaluating the implications of her findings and their relevance for understanding the correct economic and industrial relations scene: the problems which recur in different guises and those which appear to change.
